# 1    Overview

1.1    This application is designed to compare the text of multiple text files for version control.

1.2    At the end of each scan, it produces a log file with all the information of the scanned files.

# 2    How to use

2.1    In the main menu press 1 to start scan.

2.2    Insert the full path for Folder 1 (for example C:/Users/me/My Documents)

2.3    Insert the full path for Folder 2 (for example C:/Users/me/archive)

2.4    Insert the format of the files you want to compare (for example txt)

2.5    Choose 1 or 2 of the following options

2.5.1   [1] each file content will be saved to a database with its folder name

2.5.2   [2] each file content will be saved to a database by name only

2.6    Wait for the process to be done and the log file will automatically open

2.7    At the end of the log file the number of errors will be provided

# 3    Settings

3.1    -N/A-

# 4    Related files
